

QUESTIONS / ANSWERS – Network ETA

In this list, all questions we have received during the Call for offers period of the Network ETA tender are stated.

No	Question	Answer
1	Assuming that TAF/TAP TSI messages only contain information from single countries/IMs: shall the created forecasts for locations calculated from timetable and running information also only be limited to this country/IM then, or shall forecasts also get created for locations in other/following countries/IMs (which would require to connect to different national train run parts internally).	It is required to create forecasts for locations in other/following countries/IMs according to the information in the RNE TIS. The RNE TIS links national trains to international based on predefined rules if no international train number is used. The information about linked trains will be provided to the subject creating forecasts.
2	Within the pricing do you want a lumpsum pricing without breakdown? Or should we differentiate between software services, helpdesk services and professional services?	The pricing is not requested in the current phase and will be required for the next phase of the tender without breakdown.
3	Should also fill out the assessment taps?	Please do not fill out the assessment taps.
4	Can we provide a company presentation and pricing excel sheet	It is not allowed to provide a company presentation and pricing Excel sheet in this phase of the tender.
